CONSOLIDATED CASE STUDY REPORT

Student Name	Mahesh Babu Yalamarthi
Roll Number	26001436
Branch / Section	CSE (Data Science) / CSD1
Course	Web Development
Academic Year	2026–2027

Selected Case Studies

- Bus and Train Ticket Booking Interface
- Real Estate Property Listing Website
- Travel Agency Website

Submitted as part of the Web Development Activity-Based Learning assignment.

1. Introduction

This report presents three selected Web Development ABL case studies. Each case study focuses on a different type of website interface and its main user-facing sections. The screenshot/output areas are intentionally left blank for inserting project screenshots.

2. Case Study Overview

CASE STUDY 1: Bus and Train Ticket Booking Interface

A transport booking interface that helps users explore bus and train journeys, enter travel details and review available journey options.

Planned sections and features

- Journey search with source, destination and travel date
- Separate bus and train booking sections
- Journey results with timings, fares and seat/availability information
- Passenger details and booking summary

CASE STUDY 2: Real Estate Property Listing Website

A property listing website for browsing residential and commercial properties, viewing key details and contacting the property provider.

Planned sections and features

- Property categories and search/filter options
- Property cards with images, location and price
- Property details such as type, area and amenities
- Enquiry/contact section for interested visitors

CASE STUDY 3: Travel Agency Website

A travel agency website presenting destinations, tour packages and travel-related services to help visitors explore trip options.

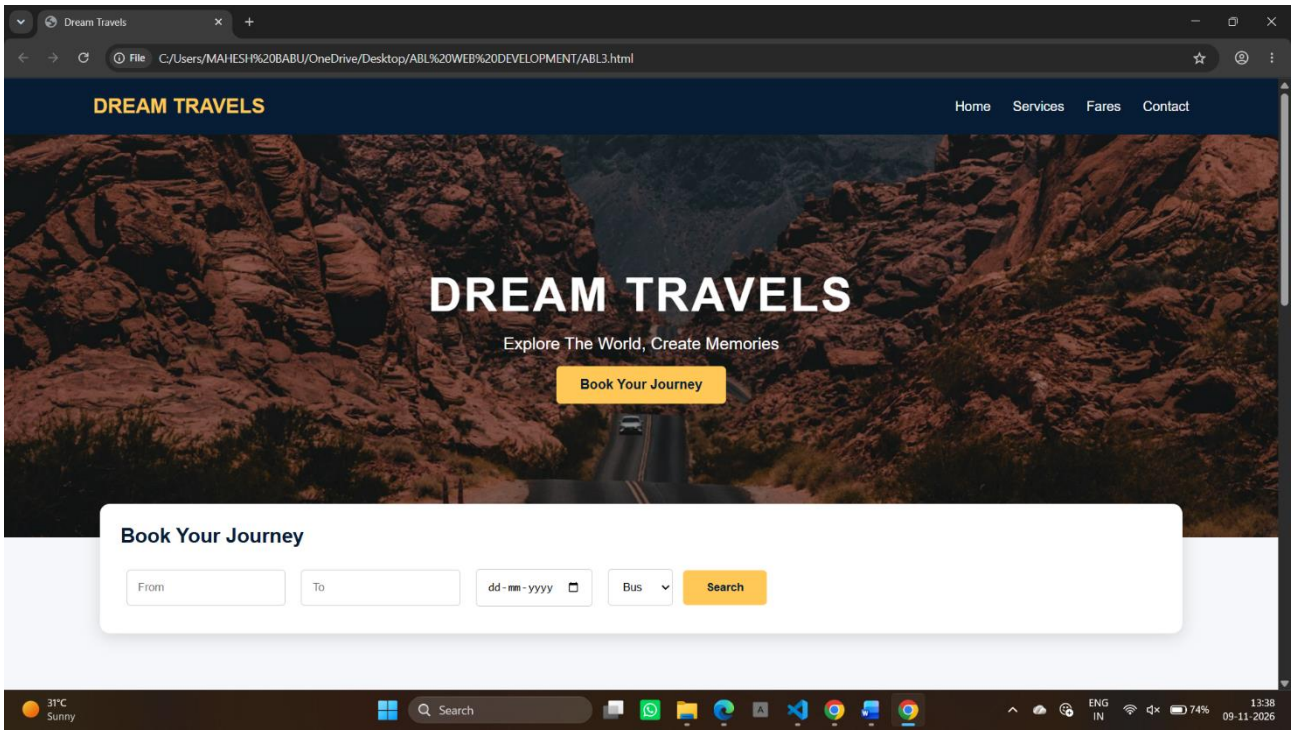

Planned sections and features

- Home page with travel-focused banner and navigation
- Destination and tour package listings
- Package details such as duration, highlights and price
- Enquiry or booking request section

CASE STUDY 1 – Bus and Train Ticket Booking Interface

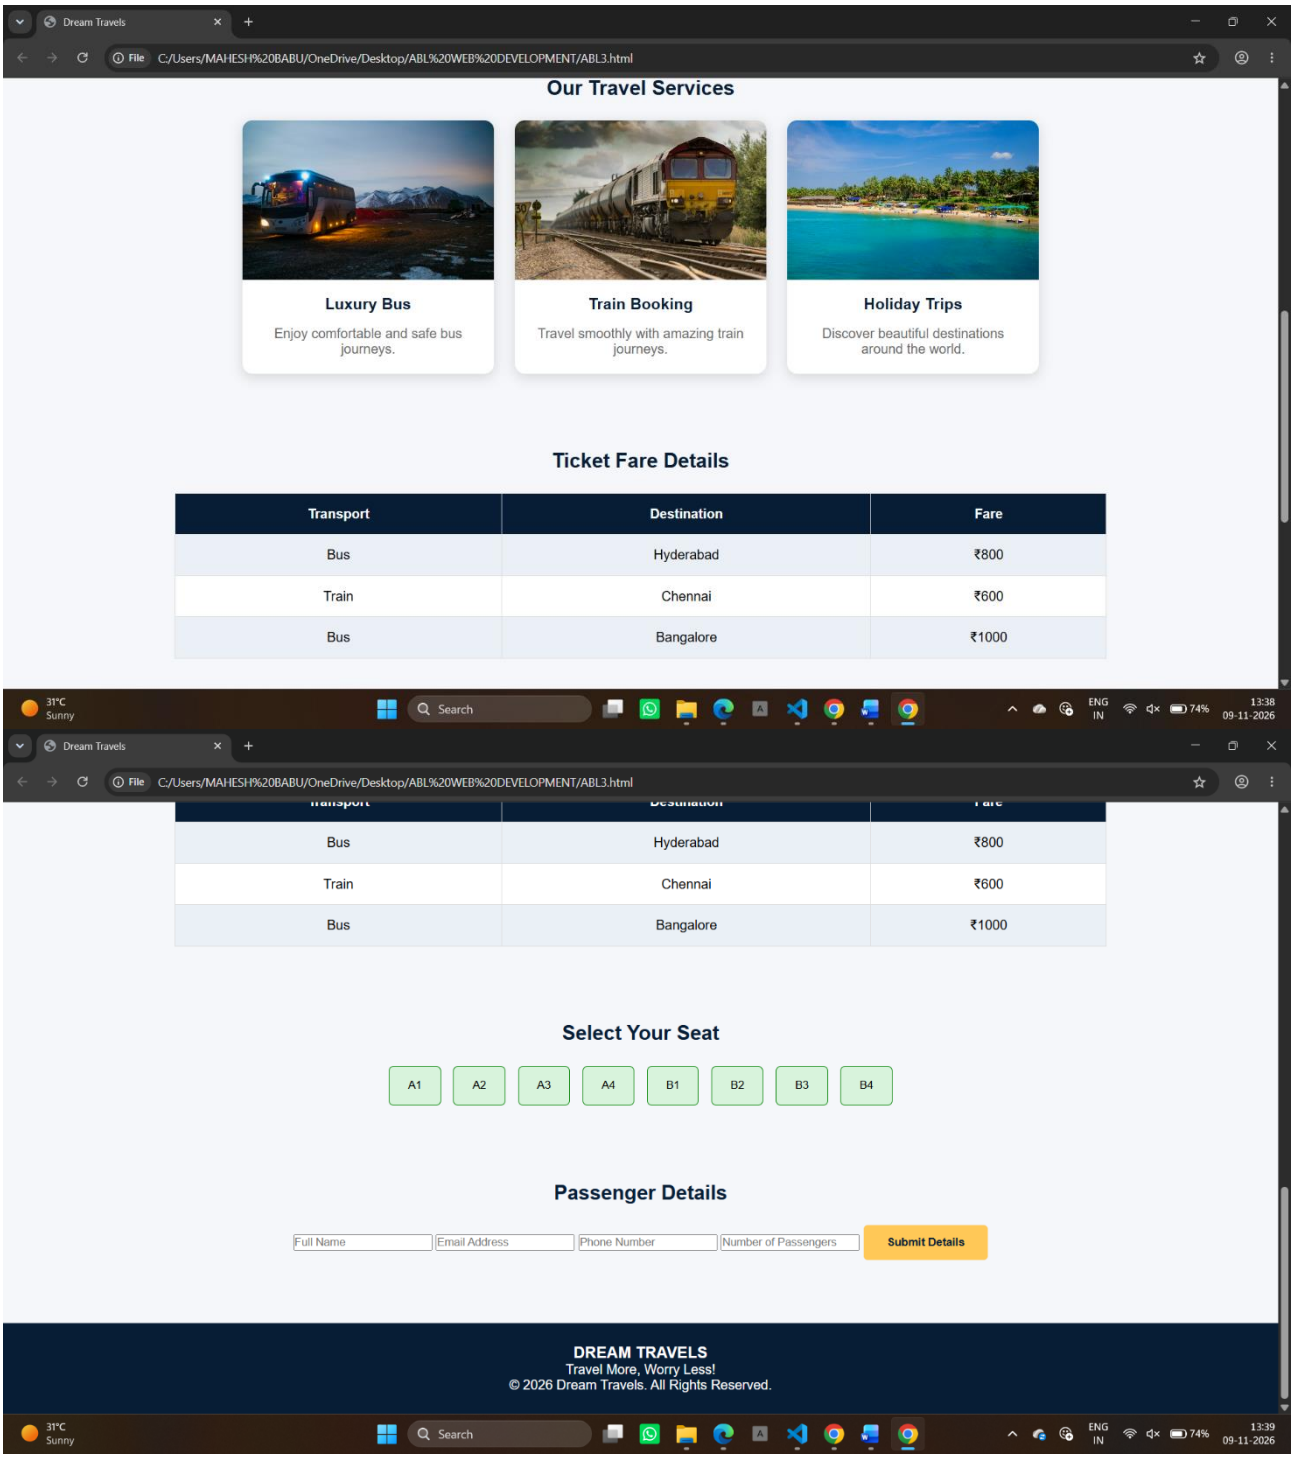

This interface focuses on searching and reviewing bus and train journeys. It is organized to help users provide trip details, compare available services and proceed to a booking summary.
